# DESCRIPTIVE STATISTIC AND PROBABILITY

---

## “AI Tools Usage Among College Students”

SEPTEMBER 21, 2026

FYDS91 – Faiza Shaikh

## **1. INTRODUCTION**

Artificial Intelligence (AI) has become an increasingly common part of students academic and personal activities. This study Examine how college students use AI tools, how frequently they use them, the time spent, their main purpose, and their perception of usefulness, satisfaction and productivity.

## **2. OBJECTIVES**

- To study AI tool usage among college students.
- To identify the most frequent used AI tool.
- To measure frequent and duration of AI tool.
- To identify the main purposes of AI usage.
- To study student's helpfulness and satisfaction ratings.
- To examine the relationship between AI usage frequency and perceived helpfulness.

## **3. BACKGROUND OF THE STUDY**

AI tools are increasingly used by college students for learning, research, assignments, and problem solving. However, there is limited small scale statistical research examining student's usage patterns, time spent, perceived helpfulness, and academic productivity together. This study addresses this gap by collecting primary data from 107 college students and analyzing their AI usage using statistical techniques.

## **4. METHODOLOGY**

| Item              | Details                   |
|-------------------|---------------------------|
| Type of Data      | Primary data              |
| Sample Size       | 107                       |
| Collection Method | Google Form Questionnaire |
| Sampling Method   | Convenience sampling      |
| Software          | Microsoft Excel           |

## **5. SCOPE OF THE PROJECT**

The study covers AI usage patterns among college students, including tools used, frequency, time spent, purpose, helpfulness, satisfaction, time saving benefits, academic productivity and future usage.

## **6. ANALYSIIS**

Analysis include frequency distribution, percentages, mean, median, mode, quartiles, variance, standard deviation, histogram, box plot, scatter plot, ogives, and spearman rank correlation.

## **QUESTIONNAIRE:**

1. Age
2. Gender
3. Year of Study
4. Field/Course of Study
5. Do you use AI tools?
6. Which AI tool do you use most frequently?
7. How frequently do you use AI tools?
8. On average, how much time do you spend using AI tools per day?
9. What is your main purpose for using AI tools?
10. How helpful do you find AI tools for your studies?
11. Do AI tools help you save time while studying?
12. Rate your overall satisfaction with AI tools.
13. Do you think AI tools improve your academic productivity?
14. How do you think your use of AI will change in the future?

## **RESPONSES:**

| 1 | Age   | Gender | Year of Study | Field/Course of Study      | Do you use AI tools? | Which AI tool do you use most frequently? | How frequently do you use AI tools? | On average, how much time |
|---|-------|--------|---------------|----------------------------|----------------------|-------------------------------------------|-------------------------------------|---------------------------|
| 2 | 21-22 | Female | Third year    | Commerce / Managemen       | Yes                  | ChatGPT                                   | 7 days                              | Less than 15 minutes      |
| 3 | 17-18 | Female | First year    | Bsc nutrition and dietetic | Yes                  | ChatGPT                                   | 7 days                              | Less than 15 minutes      |
| 4 | 19-20 | Female | Second year   | Arts / Humanities          | Yes                  | Google Gemini                             | 7 days                              | Less than 15 minutes      |
| 5 | 17-18 | Female | First year    | Engineering                | Yes                  | ChatGPT                                   | 7 days                              | Less than 15 minutes      |
| 6 | 19-20 | Female | First year    | Data Science / AI          | Yes                  | ChatGPT                                   | 7 days                              | 15-30 minutes             |
| 7 | 21-22 | Male   | Second year   | Commerce                   | Yes                  | ChatGPT                                   | 1-2 days per week                   | 15-30 minutes             |
| 8 | 22-23 | Female | Fourth year   | Commerce / Managemen       | Yes                  | ChatGPT                                   | 2-3 days per week                   | Less than 15 minutes      |

| 1 | What is your main purpose for using AI tools? | How helpful do you find AI tools for your studies? | Do AI tools help you save time while studying? | Rate your overall satisfaction with AI tools. | Do you think AI tools improve your academic | How do you think your use of AI will change in the future? |
|---|-----------------------------------------------|----------------------------------------------------|------------------------------------------------|-----------------------------------------------|---------------------------------------------|------------------------------------------------------------|
| 2 | Personal use                                  | 5                                                  | Yes                                            | 5                                             | Agree                                       | 5                                                          |
| 3 | Understanding difficult topics                | 4                                                  | Moderately                                     | 5                                             | Neutral                                     | 5                                                          |
| 4 | Personal use                                  | 5                                                  | Yes                                            | 5                                             | Agree                                       | 5                                                          |
| 5 | Research/information                          | 5                                                  | Yes                                            | 5                                             | Agree                                       | 5                                                          |
| 6 | Academic assignments                          | 5                                                  | Yes                                            | 5                                             | Agree                                       | 5                                                          |
| 7 | Research/information                          | 4                                                  | Moderately                                     | 5                                             | Agree                                       | 2                                                          |
| 8 | Research/information                          | 5                                                  | Yes                                            | 5                                             | Agree                                       | 5                                                          |

## 7. FREQUENCY DISTRIBUTION

### • Frequency of Age:

| Age Group     | Frequency |
|---------------|-----------|
| 17- 18        | 35        |
| 19-20         | 21        |
| 21-22         | 24        |
| 22-23         | 26        |
| 23-24         | 1         |
| <b>Total:</b> | 107       |

### • Frequency for Gender:

| Gender        | Frequency |
|---------------|-----------|
| Male          | 54        |
| Female        | 53        |
| <b>Total:</b> | 107       |

### • Frequency Distribution of Year of Study:

| Year of Study | Frequency |
|---------------|-----------|
| First Year    | 42        |
| Second Year   | 18        |
| Third Year    | 17        |
| Fourth Year   | 30        |
| <b>Total:</b> | 107       |

### • Frequency Distribution of AI tool Usage:

| Frequency of Use        | Frequency |
|-------------------------|-----------|
| 1-2 days per week       | 40        |
| 3-5 days per week       | 27        |
| 7 days per week (Daily) | 39        |
| 2-3 days per week       | 1         |
| <b>Total:</b>           | 107       |

### • Most Frequently Used AI Tools:

| AI Tools          | Frequency |
|-------------------|-----------|
| ChatGPT           | 75        |
| Google Gemini     | 26        |
| Claude            | 3         |
| Microsoft Copilot | 3         |

|               |     |
|---------------|-----|
| <b>Total:</b> | 107 |
|---------------|-----|

- Daily Time Spent:**

| Time Spent           | Frequency |
|----------------------|-----------|
| 15-30 minutes        | 44        |
| Less than 15 minutes | 35        |
| 31-60 minutes        | 16        |
| 1-2 hours            | 8         |
| More than 2 hours    | 4         |
| <b>Total:</b>        | 107       |

- Frequency Distribution of Overall Satisfaction with AI Tools:**

| Satisfaction Rating  | Frequency |
|----------------------|-----------|
| 1- Very Dissatisfied | 9         |
| 2- Dissatisfied      | 7         |
| 3- Neutral           | 22        |
| 4- Satisfied         | 31        |
| 5- Very Satisfied    | 38        |
| <b>Total:</b>        | 107       |

- Frequency Distribution of AI Impact on Academic Productivity:**

| Response      | Frequency |
|---------------|-----------|
| Agree         | 66        |
| Neutral       | 39        |
| Disagree      | 2         |
| <b>Total:</b> | 107       |

- Frequency Distribution of Rating:**

| Rating        | Frequency |
|---------------|-----------|
| 1             | 11        |
| 2             | 4         |
| 3             | 17        |
| 4             | 12        |
| 5             | 63        |
| <b>Total:</b> | 107       |

## 8. HISTOGRAM

**Interpretation:** Most respondents are aged 17-18, while very few are aged 23-24. Overall, the data is concentrated among **younger** students.

**Interpretation:** Most students spend 15-30 minutes per day using AI tools, while only 4 students spend more than 2 hours. Overall, AI usage is generally **moderate** in duration.

## 9. BAR CHART

**Interpretation:** Most students use AI 1-2 days per week (40 students) closely followed by daily users (39 students).

## 10. PIE CHART

**Interpretation:** The pie chart shows that ChatGPT is the most frequently used AI tool, accounting for 70% of respondents, followed by Google Gemini at 24%. Claude and Microsoft Copilot account for 3% each. Thus, ChatGPT is the most popular AI tool among the respondents.

## 11. BOX PLOT

**Interpretation:** The median Satisfaction rating is 4, indicating that students are generally satisfied with AI tools.

$Q1 = 3$ ,  $Q2 = 4$ ,  $Q3 = 5$ ,  $IQR = 2$ ,  $Mean = 3.9534$

## 12. PIVOT CHART

**Interpretation:** The pivot chart shows that **First year students have the highest AI usage frequency**, followed by Fourth year, Second year and Third year students.

The average future AI use rating is relatively similar across the years, suggesting that students generally expect their AI usage to increase in the future.

### 13. OGIVE

| Age Group | Frequency | Less Than Type Cumulative Frequency |
|-----------|-----------|-------------------------------------|
| 17- 18    | 35        | 35                                  |
| 19-20     | 21        | 56                                  |
| 21-22     | 24        | 80                                  |
| 22-23     | 26        | 106                                 |
| 23-24     | 1         | 107 = N                             |
|           |           |                                     |

**Interpretation:** The ogive shows that 35 students fall in the first age group, while the cumulative frequency increases to 56, 80, 106, 107 across the age groups. This indicates that most respondents are concentrated in the younger age groups, with very few students in the highest age group.

## 14. MEASURES OF CENTRAL TENDENCY

Age:

|        |       |
|--------|-------|
| Mean   | 21.4  |
| Median | 20.26 |
| Mode   | NA    |

Helpfulness of AI Tools:

|        |      |
|--------|------|
| Mean   | 3.99 |
| Median | 4    |
| Mode   | 5    |

Overall Satisfaction:

|        |      |
|--------|------|
| Mean   | 3.99 |
| Median | 4    |
| Mode   | 5    |

Future Use of AI:

|        |      |
|--------|------|
| Mean   | 4.05 |
| Median | 5    |
| Mode   | 5    |

Recent Use of AI Tools:

|        |      |
|--------|------|
| Mean   | 4.14 |
| Median | 4    |
| Mode   | 1.5  |

Time Spent/Day:

|        |       |
|--------|-------|
| Mean   | 34.54 |
| Median | 20.1  |
| Mode   | 18.15 |

### Interpretation:

#### 1. Age:

The mean age of the respondents is 21.4 years, while the median age is 20.26 years. **There is no mode, indicating that no particular age occurs most frequently in the data.**

#### 2. Helpfulness of AI Tools:

The mean helpfulness rating is 3.99, with a median of 4 and a mode of 5. This indicates that **most respondents consider AI tools to be highly helpful.**

#### 3. Overall Satisfaction:

The mean satisfaction rating is 3.99, while the median is 4 and the mode is 5. This shows that **respondents are generally satisfied with the use of AI tools, with 5 being the most common rating.**

#### 4. Future Use of AI:

The mean rating for future use of AI is 4.05, with both the median and mode equal to 5. This indicates **a strong willingness among respondents to continue using AI tools in the future.**

### 5. Recent Use of AI Tools:

The mean value is 4.14, with a median of 4 and a mode of 1.5. This suggests that respondents frequently use AI tools in their recent activities.

### 6. Time Spent/Day:

The average time spent using AI tools is 34.54 minutes per day. The median is 20.1 minutes, while the mode is 18.15 minutes. This indicates that although the typical respondent spends around 20 minutes per day, some respondents spend considerably more time using AI tools.

### ❖ Overall Interpretation:

Overall, the data indicates that AI tools are widely used and positively perceived by the respondents. The high helpfulness and satisfaction ratings, along with the high future-use rating, suggest that AI is becoming an important tool in the respondents' academic and daily activities.

## 15. POSITIONAL MEASURES

Age:

|                                                                   |                     |
|-------------------------------------------------------------------|---------------------|
| Quartiles (Q1, Q2, Q3)                                            | 18.03, 20.26, 22.51 |
| Percentile (P <sub>25</sub> , P <sub>50</sub> , P <sub>75</sub> ) | 18.03, 20.26, 22.51 |
| Deciles (D <sub>2</sub> , D <sub>5</sub> , D <sub>8</sub> )       | 17.72, 20.26, 22.72 |

Helpfulness of AL tools:

|                                                                   |           |
|-------------------------------------------------------------------|-----------|
| Quartiles (Q1, Q2, Q3)                                            | 3.5, 4, 5 |
| Percentile (P <sub>25</sub> , P <sub>50</sub> , P <sub>75</sub> ) | 3.5, 4, 5 |
| Deciles (D <sub>2</sub> , D <sub>5</sub> , D <sub>8</sub> )       | 3, 4, 5   |

Future Uses of AI:

|                                                                   |         |
|-------------------------------------------------------------------|---------|
| Quartiles (Q1, Q2, Q3)                                            | 3, 5, 5 |
| Percentile (P <sub>25</sub> , P <sub>50</sub> , P <sub>75</sub> ) | 3, 5, 5 |
| Deciles (D <sub>2</sub> , D <sub>5</sub> , D <sub>8</sub> )       | 3, 5, 5 |

Overall Satisfaction:

|                                                                   |         |
|-------------------------------------------------------------------|---------|
| Quartiles (Q1, Q2, Q3)                                            | 3, 4, 5 |
| Percentile (P <sub>25</sub> , P <sub>50</sub> , P <sub>75</sub> ) | 3, 4, 5 |
| Deciles (D <sub>2</sub> , D <sub>5</sub> , D <sub>8</sub> )       | 3, 4, 5 |

Time Spent/Day:

|                                                                   |                     |
|-------------------------------------------------------------------|---------------------|
| Quartiles (Q1, Q2, Q3)                                            | 11.46, 21.31, 32.34 |
| Percentile (P <sub>10</sub> , P <sub>40</sub> , P <sub>90</sub> ) | 4.59, 17.66, 69.75  |
| Deciles (D <sub>1</sub> , D <sub>5</sub> , D <sub>9</sub> )       | 4.59, 21.31, 69.75  |

Recent Use of AI Tools:

|                                                                   |           |
|-------------------------------------------------------------------|-----------|
| Quartiles (Q1, Q2, Q3)                                            | 1.5, 4, 7 |
| Percentile (P <sub>25</sub> , P <sub>50</sub> , P <sub>75</sub> ) | 1.5, 4, 7 |
| Deciles (D <sub>2</sub> , D <sub>5</sub> , D <sub>8</sub> )       | 1.5, 4, 7 |

### Interpretation:

#### 1. Age:

The first quartile (Q1) is 18.03 years, the median (Q2) is 20.26 years, and the third quartile (Q3) is 22.51 years. This indicates that 50% of respondents are between approximately 18.03 and 22.51 years. The selected percentiles show a similar age distribution, while the deciles indicate that the age values are concentrated around the younger age groups.

## 2. Helpfulness of AI Tools:

The quartiles are 3.5, 4, and 5. This means that 25% of respondents rated the helpfulness at or below 3.5, 50% at or below 4, and 75% at or below 5. **The results indicate that respondents generally consider AI tools helpful, with ratings concentrated toward the higher end.**

## 3. Future Uses of AI:

The quartiles are 3, 5, and 5. This shows that the middle 50% of respondents have ratings between 5 and 5, indicating a strong preference for using AI in the future. **The results suggest that respondents have a positive intention to continue using AI tools.**

## 4. Overall Satisfaction:

The quartiles are 3, 4, and 5. Thus, 25% of respondents have a satisfaction rating of 3 or below, 50% have a rating of 4 or below, and 75% have a rating of 5 or below. **Overall, the distribution indicates a generally high level of satisfaction with AI tools.**

## 5. Time Spent/Day:

The quartiles are 11.46, 21.31, and 32.34 minutes. This means that 25% of respondents spend up to 11.46 minutes, 50% spend up to 21.31 minutes, and 75% spend up to 32.34 minutes per day using AI tools. **The percentile and decile values also show that time spent varies considerably among respondents.**

## 6. Recent Use of AI Tools:

The quartiles are 1.5, 4, and 7. This indicates that the middle 50% of respondents have recent-use values between 1.5 and 7. The median value of 4 suggests a moderate level of recent AI-tool usage, **while the wider quartile range indicates variation in how frequently respondents use AI tools.**

## ❖ Overall Interpretation:

Overall, the positional measures show that AI tools are positively perceived and widely used by the respondents. The high quartile and median values for helpfulness, satisfaction, and future use indicate positive attitudes toward AI, while Time Spent/Day shows considerable variation in the amount of time respondents spend using AI tools.

# 16. MEASURES OF DISPERSION

Age:

|                          |        |
|--------------------------|--------|
| Range                    | 6      |
| Quartile Deviation       | 2.25   |
| Mean Absolute Deviation  | 1.90   |
| Standard Deviation       | 2.07   |
| Coefficient of Variation | 10.30% |

Helpfulness of AI Tools:

|                          |        |
|--------------------------|--------|
| Range                    | 4      |
| Quartile Deviation       | 0.75   |
| Mean Absolute Deviation  | 0.86   |
| Standard Deviation       | 1.15   |
| Coefficient of Variation | 28.90% |

## Future Uses of AI:

|                          |        |
|--------------------------|--------|
| Range                    | 4      |
| Quartile Deviation       | 1      |
| Mean Absolute Deviation  | 1.12   |
| Standard Deviation       | 1.36   |
| Coefficient of Variation | 33.50% |

## Time Spent/Day:

|                          |        |
|--------------------------|--------|
| Range                    | 142.50 |
| Quartile Deviation       | 18.75  |
| Mean Absolute Deviation  | 22.03  |
| Standard Deviation       | 32.23  |
| Coefficient of Variation | 104.75 |

## Overall Satisfaction:

|                          |        |
|--------------------------|--------|
| Range                    | 4      |
| Quartile Deviation       | 1      |
| Mean Absolute Deviation  | 0.87   |
| Standard Deviation       | 1.11   |
| Coefficient of Variation | 28.10% |

## Recent Uses of AI Tools:

|                          |        |
|--------------------------|--------|
| Range                    | 5.50   |
| Quartile Deviation       | 2.75   |
| Mean Absolute Deviation  | 2.08   |
| Standard Deviation       | 2.38   |
| Coefficient of Variation | 57.45% |

**Interpretation:**

1. Age: The age data has a range of 6 years and a low CV of 10.30%, showing that the ages of respondents are relatively consistent.
2. Helpfulness of AI Tools: The standard deviation is 1.15 and CV is 28.90%, indicating moderate variation in respondents' helpfulness ratings.
3. Future Uses of AI: The CV of 33.50% indicates comparatively higher variation in respondents' opinions about future AI use.
4. Overall Satisfaction: The standard deviation is 1.11 with a CV of 28.10%, showing moderate variation in satisfaction ratings.
5. Time Spent/Day: The standard deviation is 32.23 minutes and CV is 104.75%, indicating very high variation in the amount of time respondents spend using AI tools each day.
6. Recent Use of AI Tools: The CV is 57.45%, showing considerable variation in how frequently respondents use AI tools.

**17. SKEWNESS AND KURTOSIS**

## Age:

|          |         |
|----------|---------|
| Skewness | -0.185  |
| Kurtosis | -1.6057 |

## Use of AI Tools:

|          |        |
|----------|--------|
| Skewness | 0.122  |
| Kurtosis | -1.657 |

**Time Spent/Day:**

|          |       |
|----------|-------|
| Skewness | 2.283 |
| Kurtosis | 5.547 |

**Helpfulness of AI Tools:**

|          |        |
|----------|--------|
| Skewness | -1.095 |
| Kurtosis | 0.358  |

**Overall Satisfaction:**

|          |        |
|----------|--------|
| Skewness | -0.888 |
| Kurtosis | -0.087 |

**Future Use of AI:**

|          |        |
|----------|--------|
| Skewness | -1.126 |
| Kurtosis | -0.087 |

**Interpretation:****1. Age:**

The skewness is -0.185, indicating a nearly **symmetric distribution with a slight negative skew**. The kurtosis of -1.609 indicates a **relatively flat distribution**.

**2. Frequency of AI Tool Use:**

The skewness is 0.122, showing that the distribution is **almost symmetric with a very slight positive skew**. The kurtosis of -1.657 indicates a **relatively flat distribution**.

**3. Time Spent/Day:**

The skewness is 2.283, indicating a **strong positive skew**, meaning a small number of respondents spend much more time using AI than the majority. The kurtosis of 5.547 indicates a **highly peaked distribution with relatively heavy tails**.

**4. Helpfulness of AI Tools:**

The skewness is -1.095, showing a **negative skew** because many respondents gave high helpfulness ratings. The kurtosis of 0.358 indicates a distribution close to normal but **slightly more peaked**.

**5. Overall Satisfaction:**

The skewness is -0.888, indicating a **moderate negative skew**, with responses concentrated toward higher satisfaction levels. The kurtosis of 0.012 is very close to zero, indicating a **distribution approximately similar to a normal distribution**.

**6. Future Use of AI:**

The skewness is -1.126, indicating a **negative skew** because most respondents selected higher ratings for future AI use. The kurtosis of -0.087 is close to zero, suggesting an **approximately normal-shaped distribution**.

## 18. CORRELTION.

### ❖ Scatter Plot:

**Interpretation:** The scatter plot shows a generally upward pattern, indicating a moderate positive relationship between perceived helpfulness and overall satisfaction with AI tools. Students who find AI tools more helpful generally tend to report higher satisfaction.

### ❖ Karl Pearson's Correlation Coefficient:

$$r = 0.581$$

The correlation coefficient of 0.581 indicates a Moderate Positive Correlation between perceived helpfulness and overall satisfaction with AI tools.

### ❖ Spearman's Rank Correlation:

$$P = 0.538$$

The rank correlation coefficient of 0.538 also indicates a Moderate Positive relationship, suggesting that students who rate AI tools as a more helpful generally tend to report higher satisfaction

## 19. REGRESSION

## ❖ Regression Line:

$$Y = 1.719 + 0.560 X$$

X = Helpfulness ratings

Y = Predicted Overall Satisfaction

## ❖ Interpretation:

The slope is 0.560, which means that for every 1-unit increase in helpfulness rating, the predicted overall satisfaction increases by approximately 0.56 units.

The correlation coefficient is  $r = 0.581$ , indicating a moderate positive relationship between helpfulness and satisfaction.

The coefficient of determination is:

$$R^2 = 0.338$$

So, approximately 33.8% of the variation in overall satisfaction can be explained by helpfulness ratings.

## ❖ Prediction Example:

$$Y = 1.719 + (0.560) (4)$$

$$Y = 3.96$$

## 20. CONCLUSION

The study on “**AI Tools Usage Among College Students**” was conducted using primary data collected from **107 college students**. The statistical analysis provides the following major findings:

1. **ChatGPT is the most frequently used AI tool**, used by 75 respondents, accounting for approximately **70%** of the respondents. Google Gemini follows with 26 respondents.
2. The majority of respondents use AI tools **1–2 days per week (40 students)**, closely followed by **daily users (39 students)**, showing that AI has become a regular part of students' activities.
3. The most common daily usage duration is **15–30 minutes**, reported by 44 students, while only 4 students spend more than 2 hours per day.
4. Students generally have a **positive perception of AI tools**. The mean helpfulness rating is **3.99**, with a median of 4 and mode of 5.
5. The overall satisfaction level is also high, with a **mean satisfaction rating of 3.99**, median of 4 and mode of 5.
6. A large number of respondents are willing to continue using AI tools. The **future-use mean is 4.05**, with both median and mode equal to 5.
7. Regarding academic productivity, **66 respondents agreed** that AI has a positive impact, while 39 were neutral and only 2 disagreed.

8. The measures of dispersion show that **time spent using AI varies considerably** among students, with a coefficient of variation of **104.75%**.
9. The time-spent distribution has a **positive skewness of 2.283**, indicating that a smaller number of students spend considerably more time using AI than the majority.
10. The skewness of helpfulness (**-1.095**) and satisfaction (**-0.888**) indicates that responses are concentrated toward the higher ratings.
11. The scatter plot shows an **upward relationship between perceived helpfulness and overall satisfaction**, suggesting that students who find AI more helpful generally tend to report higher satisfaction.
12. **Karl Pearson's correlation coefficient is reported as 0.581** in the interpretation, indicating a **moderate positive relationship** between helpfulness and satisfaction.
13. The **Spearman rank correlation of 0.538** also indicates a moderate positive relationship between helpfulness and satisfaction.
14. The regression equation is  $Y = 1.719 + 0.560X$ , indicating that an increase of one unit in helpfulness is associated with an estimated **0.56-unit increase in overall satisfaction**.
15. The coefficient of determination  $R^2 = 0.338$  indicates that approximately **33.8% of the variation in overall satisfaction** is explained by helpfulness ratings in the regression model.

#### FINAL OVERALL FINDING:

**Overall, the study concludes that AI tools are widely used and positively perceived by college students. ChatGPT is the dominant AI tool, most students use AI regularly for relatively short periods, and respondents generally consider AI helpful and satisfying. The high future-use ratings and positive academic-productivity responses indicate strong acceptance of AI among students. The correlation and regression analysis further suggest that students who perceive AI tools as more helpful tend to report greater satisfaction. However, the large variation in daily time spent using AI shows that usage patterns differ considerably among students.**
